For the attention of Dr Hamid Jalilvand and the Editorial Board of Ecology of Iranian Forest

Dear Dr Hamid Jalilvand

Thank you for your journal submission. I am pleased to say it has been accepted for inclusion in the CAB Abstracts database. I am also writing to tell you about a full text repository that has been developed by CABI and to enquire whether you would be interested in your journal being included within it.

As you know, CABI (<https://www.cabidigitallibrary.org/product/kg>) is an intergovernmental, not-for-profit organisation, providing information and scientific services in the developed and developing world. The CAB Abstracts database aims to document the world's published literature in plant and animal science, agriculture, food, forestry and related subjects. The Global Health database is dedicated to public health research and practice.

We are currently contacting editors and publishers of journals and newsletters on the subject of CABI's full text repository. Would you be interested in participating in this project by agreeing to the full text of Ecology of Iranian Forest papers being included in our full text repository?

We have had a great deal of feedback in recent years from the users of our database concerning the link to the full text of original papers. The CAB Abstracts and Global Health Databases are valued by researchers and librarians because of the wide range of published material covered including conference proceedings, books, reports and journals published world wide. However, many of these documents are difficult for the researchers and librarians to locate. Although many journals and conference proceedings are now being published on the internet, links to these are often changed or broken and when internet sites are redesigned older documents are often discarded.

In response to these issues, we have created a repository of full text material where documents can be located by searching the CAB Abstracts and Global Health databases. By including the scientific papers from Ecology of Iranian Forest in the repository we can ensure that they are preserved and easily located by scientists and professionals throughout the world, both now and in the future. This would also be a valuable way of promoting the journal and its research amongst the global users of both databases.

We have been contacting a considerable number of editors over the last few months and have been fortunate to have had an enthusiastic response, however it would be very nice to see Ecology of Iranian Forest included along with the 800+ other journals that have currently agreed to participate. If you would like to see the full lists of conference and journal content already confirmed for inclusion in the full text repository please access:

<https://www.cabi.org/publishing-products/cabi-full-text/>

In requesting your permission to include your title in the full text repository, we would only require Internet Publishing Rights. We would not require exclusive publishing rights (the papers could also be made available by you through other internet sites, at any time), and we would not be seeking copyright, which would be retained by the original publisher. We would be very happy to work from your web site for abstracting and indexing and create pdfs from there to link to the abstracts.

I attach a copy of our standard agreement for your consideration.

I sincerely hope that the Editorial Board of Ecology of Iranian Forest can give consent to make it available as a click through from the CAB Abstracts database as this will give a considerably enhanced exposure to the journal both amongst and beyond the forest science communities world wide.

If you have any queries or would like any further information then please do not hesitate to contact me.

I look forward to hearing from you.

Yours sincerely

Julie Walker
